

# Software Industry Profile

## General Background

Washington state is home to the world's largest software company, Microsoft, as well as over 6,346 additional companies that provide supply or custom software and related services. It is estimated that these companies generate \$30 billion in business in Washington state.

According to the WSA, approximately 67,711 people in Washington State were employed in the software industry in 2000. A study by the Northwest Policy Center indicates that the software industry grew 369.8% between 1990 and 2000.

Most of the software companies in Washington State are clustered primarily in the North and Puget Sound, as well as Tri-Cities, Spokane, the Olympic Peninsula, and Bellingham. The software and other high tech sectors in Washington are backed by world-class research and educational institutions, which provide a talented labor pool skilled in the industry and in supporting technology companies.

## Exports

Software is considered a service and is not measured in overall trade statistics. It is estimated that if software exports were included in our state's overall export statistics -- \$35 billion in 2001 -- it would increase this amount by \$5 to \$10 billion.

The strongest export markets for software include Japan, Korea, and Europe, but many companies in Washington state are also leaders in emerging

markets such as India, South America, and Southeast Asia.
